

COOPER PRECISION REVERSION PROTOCOL (CPRP)

Quick Reference Guide — Version 1.4 | 10 August 2026

STRATEGY IDENTITY

Range-bound mean-reversion on **MES** (primary), **MNQ**, **MYM**. Sell confirmed resistance, buy confirmed support. Hard risk: −\$50 to −\$100 max per trade. Pause 30 minutes (or until new clear range forms) after any S/R break. Static 1-Hour (or 4H) chart is context only — never generates entries.

CHART PAIR HIERARCHY (v1.4 — approved pairs only)

Working pairs use higher structure timeframes for cleaner RSI and better range definition. The 5-minute + 1-minute pair is **not** an approved working pair.

Situation	Structure	Execution	Notes
Default / most sessions	15-minute	5-minute	Cleaner RSI, better range definition, still responsive
Larger / slower ranges / lower volume	30-minute	15-minute	Highest quality S/R, least noise

RSI RULES (UPDATED v1.4)

Prefer divergence at the S/R level over absolute extremes. Absolute 70/30 on the 5-minute execution chart is low reliability as a standalone mandatory trigger.

- On 15m / 30m: RSI extremes are clearer and more useful — treat as an alert, not an automatic entry.
- If RSI is extreme on 15m/30m but price is still mid-range — wait. Do not force a mid-range trade.
- Actual entry still requires: confirmed S/R level + price action + volume confirmation.
- Optional: run faster RSI (7 or 9) on the execution chart purely for divergence visuals. Keep standard 14 on the structure chart.

CONFIRMATION HIERARCHY

1. Confirmed Support / Resistance level of the active range (structure chart)
2. Price action at the level (rejection, absorption, engulfs)
3. Volume confirmation
4. RSI (mainly divergence on execution TF; absolute levels more useful on 15m/30m)

KEY OPERATING RULES

- New session lows / highs that break the prior range — pause. Do not hunt lower-TF bounces.
- 1-Hour (or 4H) window is mandatory context filter only.
- Hard dollar risk remains −\$50 to −\$100 max. Stay on micros.
- Fewer, higher-quality trades preferred over high-frequency noise trades.
- Approved chart pairs only: **15m + 5m** (default) and **30m + 15m**.

Founder: Raymon Michael Cooper | Official Rulebook base: v1.3 (9 Aug 2026) | This Quick Ref: v1.4 (10 Aug 2026) — 5m+1m removed from approved pairs
