

COOPER PRECISION REVERSION PROTOCOL

Quick Reference Card • Micro Futures • v1.6 • 12 Aug 2026

"Trade the boundaries. Respect the structure. Control the risk."

INSTRUMENTS • STYLE

MES (Primary) • MNQ • MYM — Micros only. **Style:** Intraday Range / Channel Reversion — **Not scalping.**

MULTI-TIMEFRAME HIERARCHY

Chart	Role	Use For
60-minute (static)	Overall Bias / Sentiment	Trend context only — never generates entries
15m or 30m	Structure & Levels	Confirmed S/R zones + swing structure ("map")
5m or 15m	Timing & Pressure	Entry timing, rejection, order flow ("trigger")

WORKING PAIRS — SELECT BY CONDITIONS

Pair	When	Roles
15m + 5m (Default)	Normal volume, clean ranges, active session	15m = structure 5m = timing + pressure
30m + 15m	Pre-market, low volume, lunch, wide/choppy ranges	30m = structure 15m = timing 5m = fine-tune only

No 1-minute charts. Former 5m+1m pair is fully retired.

CORE EDGE — RANGE / CHANNEL REVERSION

Identify confirmed S/R range or channel (sideways **or** trending). Fade the boundaries: **Buy Support • Sell Resistance**. Continue until structure breaks. Direction of the channel does not matter — Protocol is neutral.

STRUCTURE REQUIREMENTS

- ≥2 clear touches (or near-touches) at both upper and lower boundaries
- Visible rejection / respect on the higher TF of the working pair
- Structure unambiguous — if unclear, stand aside
- Once confirmed: Upper = Resistance (sell) | Lower = Support (buy)

New session highs: Old highs/lows lose relevance. Trade the **current developing structure** (new swing highs, higher lows on pullbacks, local ranges inside the move).

ORDER FLOW (v1.6)

Bid = Buying Power • Ask = Selling Power. More aggressive asks → price tends down. More aggressive bids → price tends up. Shift in dominance at a key level is strong confirmation.

RSI GUIDANCE

Secondary confirmation only. Prefer divergence **at the actual S/R level**. Elevated RSI that stays high often = **strong buying pressure still in control** — do not fade solely because it is overbought. Wait for structure break + order-flow shift + RSI failure to reclaim before treating as exhaustion.

PRE-TRADE CHECKLIST (ALL REQUIRED)

1	Confirmed S/R on higher TF of working pair	6	RSI favorable (divergence preferred at level)
2	Price at/near boundary (Support=long / Resistance=short)	7	Hard stop fits −\$50 to −\$100 risk
3	Price-action rejection on lower TF	8	No recent structure break (or 30-min pause done)
4	Volume supports rejection / absorption	9	60m bias not strongly opposing (or highly selective)
5	Order flow confirms (bids defend / asks aggressive)		

HARD RISK • EXITS • STRUCTURE BREAK

Max loss per trade: −\$50 to −\$100. Exit immediately at limit. No averaging down. Primary target = opposite boundary. Partial OK at mid-range. Trail only after meaningful progress.

Structure Break: Decisive close beyond boundary → flatten related positions → pause 30 minutes minimum → wait for new clear structure.

OPERATIONAL DISCIPLINE

Prefer MES unless MNQ/MYM clearly superior. Early pre-market → default to 30m+15m. Journal every trade. Weekly review vs rules. Never raise risk to recover losses. Do not force scalping in slow markets — step up timeframe and reduce frequency. Protocol is complete as written.
