

COOPER PRECISION REVERSION PROTOCOL (CPRP)

Scalping Strategy — Quick Reference Guide | v1.4 | August 14, 2026

INSTRUMENTS & CORE IDEA

MES (primary) • MNQ • MYM only. Mean-reversion scalping inside confirmed S/R ranges (sideways or trending channel). Direction does not matter — sell resistance, buy support.

CHART SETUP — UPDATED v1.4

1. Context Chart (always open)

Static **1-Hour** (or 4H). Provides trend & major S/R only. **Never generates entries.**

2. Range Definition

Higher TFs (15m / 30m etc.) used to identify and confirm the active S/R range or channel.

3. Execution Chart — Adaptive 1m or 5m (NEW)

Use the **1-minute** or **5-minute** chart — whichever is currently **respecting RSI levels**:

- Bouncing **down** at RSI Overbought (typically ≥ 70)
- Bouncing **up** at RSI Oversold (typically ≤ 30)

If neither chart is respecting RSI extremes cleanly → **stand aside**. Do not force trades.

ENTRY RULES

LONG (Buy Support)

1. Price tags confirmed Support
2. Selected TF (1m/5m) RSI Oversold or near
3. Clear PA rejection / bounce (wick, pin, engulf)
4. Volume confirmation preferred
5. Enter on bounce confirmation

SHORT (Sell Resistance)

1. Price tags confirmed Resistance
2. Selected TF (1m/5m) RSI Overbought or near
3. Clear PA rejection / bounce down
4. Volume confirmation preferred
5. Enter on rejection confirmation

All four must align: S/R location + RSI condition on chosen TF + PA rejection + (ideally) volume. Missing multiple = no trade.

RISK & EXITS

Hard Risk: Exit any trade at **−\$50 to −\$100 max** (include commissions/slippage). Non-negotiable. No averaging.

Targets: Opposite side of the range or logical intermediate level. Partial / trail once in profit OK.

Range Break: Decisive close beyond S/R with volume → **pause 30 minutes** or until new clean range forms. Do not chase.

DISCIPLINE CHECKLIST

- 1H (or 4H) context chart open and visible
- Active S/R range clearly defined on higher TF
- Chosen execution TF (1m or 5m) is respecting RSI OB/OS bounces
- S/R + RSI + PA + Volume alignment present
- Hard stop set before entry (−\$50 to −\$100)
- If neither 1m nor 5m respects RSI → stand aside
- Journal: TF selected, RSI reading, S/R level, reason, outcome

*v1.4 Update: Adaptive 1m/5m selection based on RSI respect. Official Rulebook: [Cooper_Precision_Reversion_Protocol_Official_Rulebook_v1.4.pdf](#)
