

COOPER PRECISION REVERSION PROTOCOL (CPRP)

Quick Reference Guide — Version 1.5 (Final) | 10 August 2026

STRATEGY IDENTITY

Range-bound mean-reversion on **MES** (primary), **MNQ**, **MYM**. Sell confirmed resistance, buy confirmed support. Hard risk: −\$50 to −\$100 max per trade. Pause 30 minutes (or until new clear range forms) after any S/R break. Static 1-Hour (or 4H) chart is context only — never generates entries.

CHART PAIR HIERARCHY (v1.5 — only two pairs)

No chart lower than the 5-minute is used for structure or execution. The static 1-Hour (or 4-Hour) chart remains mandatory for context only.

Situation	Structure	Execution	Notes
Primary / default	15-minute	5-minute	Cleaner RSI, better range definition, still responsive
Larger / slower ranges or lower volume	30-minute	15-minute	Highest quality S/R, least noise

RSI RULES (v1.5)

Prefer divergence at the actual S/R level over absolute 70/30 extremes. RSI is secondary confirmation. Full entry stack remains: confirmed S/R + price action + volume.

- On 15m and 30m: RSI extremes are useful as alerts / preparation signals only.
- If RSI is extreme on 15m/30m but price is still mid-range — wait. Do not enter until price reaches the confirmed boundary + price action + volume.
- Optional: faster RSI (period 7 or 9) on the execution chart for divergence visualization only. Keep standard 14 on the structure chart.

CONFIRMATION HIERARCHY

1. Confirmed Support / Resistance level of the active range (structure chart)
2. Price action at the level (rejection, absorption, engulfs)
3. Volume confirmation
4. RSI (secondary — prefer divergence at S/R; absolute levels on 15m/30m as alerts)

KEY OPERATING RULES

- New session lows / highs that break the prior range — pause. Do not hunt lower-TF bounces.
- 1-Hour (or 4H) window is mandatory context filter only.
- Hard dollar risk remains −\$50 to −\$100 max. Stay on micros.
- Fewer, higher-quality trades preferred over high-frequency noise trades.
- Chart pairs only: **15m + 5m** (primary/default) and **30m + 15m** (larger/slower).
