

CPRP SCALPING

1-Minute Keltner Mean-Reversion • Quick Reference • v1.1 • 12 Aug 2026

"Fade the extremes only when the market is quiet."

ROLE & BEST ENVIRONMENT

Secondary tool only — use when primary CPRP is quiet. **Best in sideways accumulation** / tight range-bound conditions. Never use during strong 15m or 60m trends.

CHART & INDICATORS

Element	Setting
Timeframe	1-minute only
Keltner Channel	NinjaTrader default
SMA (Midline)	14 period
RSI	14 period • 80 / 20 levels
Instruments	MES (primary), MNQ, MYM

CORE LOGIC

SMA(14) = dynamic midline. Price **below** SMA → only **longs** from lower Keltner. Price **above** SMA → only **shorts** from upper Keltner.

SETUPS

Long (Lower Half)	Short (Upper Half)
Price below SMA Repeated touches of lower Keltner RSI near/below 20 or turning up Enter near lower band Target = SMA Stop = SMA or Upper Keltner	Price above SMA Repeated touches of upper Keltner RSI near/above 80 or turning down Enter near upper band Target = SMA Stop = SMA or Lower Keltner

RISK

Max loss per scalp: **\$30–\$50** recommended. No averaging. Exit immediately on strong band break or if a valid primary CPRP setup appears.

STAND ASIDE WHEN

- Strong trend on 15m or 60m
- Price chopping through the SMA with no clear side
- Major news within 15–30 minutes
- Dead volume
- Any high-quality CPRP range/channel is present

PRE-TRADE CHECKLIST (ALL REQUIRED)

1	Primary CPRP is quiet	5	RSI stretched or turning from extreme
2	Sideways accumulation / tight range	6	Risk ≤ \$30–\$50
3	Price clearly on one side of SMA	7	No strong opposing higher-TF trend
4	Repeated respectful Keltner touches	8	No major news imminent
